

MEI® CASHFLOW™ Bunch Note Feeder

Now there's a way to deposit and secure cash faster in your smart safe or self-service system.

Store personnel and customers are no longer burdened with hand-feeding notes one at a time. A BNF-equipped MEI® Cashflow™ note validator does it all automatically.

Instead of feeding in each note, users can place a bundle of up to 50 notes on the BNF tray. In no time at all, the unit reads, validates, counts and stacks the notes securely. Meanwhile, employees are free to help customers, and customers are free to handle other transactions.

Smart Safes

In the back office or at the point of sale, a smart safe with an MEI® Cashflow™ BNF attachment is the fastest and easiest way to secure cash at your retail outlet. Only one employee needs to handle cash. Cash is exposed for less time and out of temptation's way. And retailers get a comprehensive audit trail.

Less time dealing with cash means employees have more time to spend on selling products, providing customer service and providing presence on the retail floor.

By increasing productivity and decreasing shrinkage, a smart safe with a Cashflow BNF saves precious profit every day. Many retailers see ROI in less than a year.

Kiosks/Self-Service Systems

Transactions at kiosks and self-service systems need to be fast and easy. Especially systems like enhanced ATMs, bill payment kiosks or cash-deposit systems that handle cash-heavy transactions.

With a BNF, users can deposit cash into the system quickly with less frustration.

Instead of feeding in notes one at a time, users can place them on the tray in a bundle. Less repetitive motion means a better customer experience.

Try and compare!
